

Dynamic Event Annotation

Keybinding Cheatsheet · Nellie Manual Annotation Pipeline

► Available only in Time Series / 4D Stack views, after running Analyze Dynamics. Keys act on the current timepoint.

ADD AN EVENT

First select exactly ONE point on the Skeleton layer, then press the key. The event is placed at that voxel.

Fusion / Breakage	Ctrl + 1		Tip-Edge Fusion	#FFC04D
	Ctrl + 2		Junction Breakage	#E67300
Tip-Tip Fusion / Fission	Ctrl + 3		Tip-Tip Fusion	#B57EDC
	Ctrl + 4		Tip-Tip Fission	#6A2C91
Extrusion / Retraction	Ctrl + 5		Extrusion	#4FD0C4
	Ctrl + 6		Retraction	#157A6E

INSPECT / DELETE

Ctrl + i	Show event info Select 1 point on Dynamic Events layer
d	Delete selected event Select 1 point on Dynamic Events layer

Saved per-event to <event>_events.csv in the loaded folder · see dynamics/EVENT_CORRECTION_GUIDE.md
